ISS

INTRODUCTION

This publication summarizes Census of Agriculture data for British Columbia for the years 1971 and 1981. It contains statistics for the province's eight Agriculture Reporting Regions and twenty-nine Census Divisions and describes major items pertinent to farming.

The Census of Agriculture is conducted by the federal government every five years. It serves as a benchmark for nearly all surveys conducted by Statistics Canada and provides users with detailed information on a small area basis. In addition to the data in this publication, figures are also available on a census subdivision and enumeration area basis.

It should be noted the sales limit for census farms was $50 or more in 1971 and $250 or more in 1981. Only those farms selling $2,500 or more of agricultural products are classified according to product type (see page 51). Any questions related to this report or to the Census of Agriculture in general should be directed to either of the following agencies:

The official Census of Agriculture publication for B.C. (Catalogue No. 96-911) is available from Statistics Canada at a cost of $12.00. Thanks are extended to Miss Caroline Macey who compiled this publication from Statistics Canada records. Also, congratulations are extended to Statistics Canada for conducting the Census and making the data available at an early date.

Hugh H. Bryce
Economics Branch
Chief Statistician

September, 1982

EXPLANATION OF TERMS

Years in Which Census Figures Apply

The 1981 Census of Agriculture was taken as of June 3, 1981. Statistics for agricultural holdings - operators, areas, capital values, livestock and poultry numbers, machinery and equipment, number of year round paid agricultural workers and type of organization relate to the date of the census. Crop areas sown refer to the land sown on June 1, or to be sown for harvest in the year of the census.

For the 1971 and 1981 Censuses, weeks of hired agricultural labour refer to the calendar years 1970 and 1980 respectively. Numbers of year-round workers refers to the date of the census. Value of agricultural products sold refers to the calendar year preceeding the year of the census.

Agricultural Holdings

The 1981 definition of an agricultural holding is "a farm, ranch or other agricultural holding with sales of agricultural products, during the 12 month period prior to the census, of $250 or more." The 1971 definition was the same only a $50 limit on sales was used.

The holding may consist of a single tract of land or a number of separate tracts held under the same or different tenures and operated as a single unit. Where the census-farm was made up of several parts located in different municipalities, the complete holding is reported as one unit in the municipality where the head-quarters was located.

Areas of Agricultural Holdings

The area of farms reported at any geographic level represents the area of land operated by farmers whose headquarters are located in that geographical unit. Therefore, any part of the operation located outside that unit will be included inside it and the reported area will be different from the actual agricultural area within the boundaries of that unit. This descrepancy tends to become less significant as the number of farms in the unit increases.

Crown lands, usually pasture land, which were operated under a lease arrangement with federal, provincial or municipal governments, are reported as part of the farming operation of the person to whom the land was leased. However, land which was used under a per head grazing permit or fee is not included.

Large areas of timber land or other non-agricultural land held by the operator, but operated apart from the farm business, are excluded.

Operator

This term is used in the Census of Agriculture to designate the person who is responsible for the day-to-day decisions made in the operation of the holding. As only one operator is listed for each census-farm, the number of operators is the same as the number of census-farms. If the holding was operated as a partnership, only one partner was considered to be the operator. The operator was asked to report his/her age on his/her last birthday by indicating a five year interval between 15 to 69 years and 70 years and over. The length of time the operator lived on the holding during the 12-month period prior to the census was recorded as 9-12 months, 5-8 months, 1-4 months or did not live on this holding.

Improved Land

The areas of improved land consists of the total of the areas reported for the following four land categories: crop land, improved pasture, summerfallow and other improved land. "Other improved land" includes the areas of barnyards, home gardens, lanes and roads on farms. It also includes areas of cultivated land that were lying idle, being neither summer-fallowed nor cropped, and areas of new breaking that had not been seeded.

Unimproved Land

The area of unimproved land consists of the total areas reported for woodland and other unimproved land. Woodland includes farm woodlots, land leased for cutting, and cut-over land with young growth which has or will have value as timber, fuel-wood or Christmas trees. The category excludes large timber tracts which are run as a separate business from the farm. There is some evidence that changes in the area of this item between censuses may be due to differences in interpretation. This would be particularly true in areas of bushland. Other unimproved land includes areas of native pasture or hay land that had not been cultivated, bush pasture, grazing or waste land, sloughs, marsh, rocky land, etc.

Crops

The area of crops represents the area planted or to be planted for harvest as reported by the respondent at the time of enumeration.

Actual harvested acreages may vary from the census report due to changes in planting intentions or crop failure which occurred after the date of enumeration. In the case of hay land, where two or more cuttings of hay are taken, the acreage was reported only once. Acreages from which sod is being sold are included with "other field crops."

Tree fruits were reported only when there were 25 fruit trees or more on the holdings.

The area devoted to vegetables and small cultivated fruits was reported only when these products were being grown mainly for sale.

The area of mushroom houses was recorded with that of greenhouses. Greenhouses which were used only for the initial growth of plants, which were later transplanted to the field are not included. Nursery products, cut flowers and dry bulbs were reported only when grown mainly for sale.

Fertilizer Use

The area of crops sown for harvest for which commercial fertilizer had been or was to be applied was reported. Fertilizer applied in the fall of 1970 and 1980 on crops to be harvested in 1971 and 1981 was included. Each acre was counted only once regardless of the number of applications. Lime was not considered to be commercial fertlilizer.

Spraying and Dusting

The area to which sprays or dust were applied for control of weeds and brush and/or insects and disease was reported. This includes herbicides, fungicides, insecticides and soil sterilants. Chemicals used on livestock or in farm buildings were excluded.

Irrigation

Irrigation is defined as the application of water to the land by artificial means such as a system of ditches, furrows, sprinklers or similar works including the purchase of custom irrigation. Irrigation for home grounds or gardens was excluded.

Livestock and Poultry

Livestock and poultry were reported on the holdings where they were located, regardless of ownership, except for livestock kept in community pastures. In this case, livestock are related to the holding of operator owning them rather than to the community pasture.

Where an agricultural holding was located in more than one area, the location of the total holding was determined by its headquarters, regardless of the dispersion of parts of the holding. In consequence, livestock and poultry located anywhere on such a holding were reported in the same area as the headquarters.

The 1981 Census defined cows as "cows and heifers which had calved at least once" and "heifers, 1 year and over (which have never calved)." This differs from the 1971 Census which asked for "cows and heifers, 2 years and over" and "heifers, 1 year and under 2."

Hired Agricultural Labour

Total weeks of paid agricultural labour (15 years and over) hired during the previous 12 months were recorded. Male and female labour

was recorded separately in 1971 but not in 1981. The number of paid agricultural workers employed on a year round basis, as of June 1, 1971 and June 1, 1981, was also enumerated. Housework was not included as agricultural labour. Any person doing agricultural work on the holding for wages, salary, commission or on a piece-rate or labour contract basis was reported as paid labour. This included paid managers and members of the operator's family receiving regular or specified cash wages. Total weeks of agricultural work done by members of a Hutterite colony were included as hired agricultural labour and full-time labour of the colony was included as paid year round agricultural workers.

Capital Values

This is the value of census-farm capital: land and buildings, machinery and equipment (including automobiles), livestock and poultry. Farm operators were asked to give a value for land and buildings, farm machinery and equipment on their holding regardless of tenure. The value reported was an estimate of the market value, not the original, replacement or assessed value.

The value reported for farm machinery was the present market value - that is, the amount for which the machinery and equipment would sell if there was a willing buyer and a willing seller and not a forced sale. It might be defined as the price the machine would likely bring in its present condition at an auction sale. The original or replacement value was not reported unless it conformed with the market value.

The total value of machinery and equipment includes the value of items not reported separately as well as the value of the machines which were reported separately.

Values for livestock and poultry reported in the census were compiled from data on average farm values for various types of livestock and poultry. Machinery and Equipment

The number and value were to be reported for agricultural machines on the holding at the census date, regardless of whether the machines were owned by the operator or someone else. Old machines no longer being used were not to be reported. Equipment owned in partnership was to be reported on the holding where it was located. In 1981, milking machines and bulk milk tanks were not reported separately.

Type of Organization

The respondent was asked to classify the type of agricultural holding he operated as:

1) An individual or family operation

2) A partnership with a written agreement

3) A partnership with no written agreement

4) A legally constituted company

   a) with the shares owned mostly by him and his family, or

   b) with most of the shares owned by some other person(s) or business

5) Other

Included under private operation by an individual are holdings operated by or for an individual regardless of whether owned, rented or managed. Also included is land managed for an incorporated farm in conjunction with land operated by an owner or tenant if the total operation was predominantly by the individual for himself. For 1971, partnerships include only operations having a formalized written agreement. Oral or implied agreements that were not in written form were not included as partnerships in 1971 but were classified as being operated privately by an individual. In 1981, partnerships were divided into written and unwritten agreements. The classification of "Institution" was used in 1971 but was not included in 1981. "Institution" refers to land used for agricultural purposes by institutions such as experimental farms, schools or penitentiaries, but does not include land owned by an institution but rented to an individual who operated it on his own account. A community pasture or other type of public pasture is included as an institution if the land was owned by a municipality, province or federal government. "Incorporated family" refers to farms operated as incorporated businesses with the shares owned mostly by the operator and his family. "Incorporated other" refers to farms operated as incorporated businesses with the majority of shares owned by people other than the operator and his family. Included in "other" types of organization are lands operated privately for an estate or trust company, Hutterite colonies and co-operative farms.

Economic Class

All agricultural holdings except "institutional farms",such as experimental farms, community pastures and Indian Reserves (but including Hutterite colonies) are classified into three economic classes in 1971: agricultural holdings with total sales of

agricultural products in the preceeding year of $50 or more; $1,200 or more; and $2,500 or more. These figures were adjusted in 1981 to $250 or more; $2,500 or more; and $10,000 or more.

The classification of agricultural holdings into economic classes (based upon the gross income received from sales of agricultural products) presents a measure of the productive size of the holdings. It should be noted that variations in annual production and prices of agricultural products affect the economic class of individual holdings.

More detailed breakdowns by economic class are available on request.

Product Type

The 1981 farm typing scheme is based on the potential value of sales by commodities. This potential value of sales was imputed by applying value co-efficients to the 1981 physical inventory figures. The value co-efficients were derived from the average value per unit of inventories for every census division over a specified period of time.

The method differs from the 1971 farm typing method in that the previous method was based on realized value of agricultural sales from the previous year.

For 1981 each census farm with sales of $2,500 or more was classified according to its predominant production enterprise. The commodity or group of commodities which accounted for 51% or more of total potential sales determined the product type assigned to that farm. The product types include dairy, cattle, hogs, sheep, poultry, field crops, fruits and vegetables, other specialities (greenhouses, nurseries, mushroom houses, sheep, horses, apiaries, fur farms and goats), and mixed farms (livestock predominant, field crops predominant or other combinations).

Community Pastures

Community pastures were enumerated in the municipality in which the headquarters of the pasture was located. The complete pasture was enumerated on one questionnaire.

Livestock kept on the community pasture for other farm operators were not reported on the questionnaire completed for the community pasture. Such livestock were reported on the agricultural holding of their owner.

METHODOLOGY

The 1981 Census of Agriculture was collected in conjunction with the Census of Population and Housing. The enumerators were asked to enquire at each household, where they made contact, if anyone in the household operated a census farm. Enumerators were also asked to identify all agricultural operations in their enumeration area and the corresponding operators. Each operator was asked to complete the agricultural questionnaire. The completed questionnaires were checked by the enumerator and fowarded to Statistics Canada Head Office in Ottawa. The information on the questionnaires was converted to machine readable form, checked for consistency and data were substituted for any missing values. The final data were analysed for accurcy and summarized for public release.

Metric

This publication presents area data in imperial(acres) units. Area data for 1981 is also available in metric(hectares) units upon request.

Confidentiality

All data released by the Census of Agriculture are subject to the confidentiality restrictions of Statistics Canada. To prevent disclosure of confidential material, data for areas of less than 10 farms will not be published separately, but merged with a geographically adjacent area. Also, certain data have been suppressed to prevent disclosure of operations of an identifiable individual agricultural holding. In such cases, the relevent data cell will be replaced with an "x".

Quality of Data

The Census of Agriculture is designed to obtain complete and accurate data from all farms in Canada. It is inevitable, however, in a statistical undertaking of the size and complexity of the census, that errors will occur.

Because of the many potential sources of error, an important part of census planning is to identify these potential sources so that appropriate quality controls can be built into the census operations. Each returned questionnaire was checked for completeness, and wherever expected information was missing or inconsistent follow-up contacts were made to obtain the correct data. Where missing values could not be obtained or discrepancies reconciled, values were imputed.

Coverage

Coverage errors are inherent in any census and are generally rather difficult to measure. In order to get an appreciation of the net effects of these errors, the 1981 count of census farms was compared

with an independent estimate derived from two Statistics Canada probability surveys: the Agriculture Enumerative Survey (AES), and the Farm Enumerative Survey (FES), both conducted in July of 1981. Preliminary indications are that some undercoverage exists and it appears to be at about the same level as in previous censuses.

Non-Response

In addition to undercoverage, the census is also subject to non-response. Non-response to the entire questionnaire is usually attributable to refusal to complete the form or the farmer's absence from the farm when the census is taken. This information is ultimately obtained through follow-up or through legal means, but it is generally too late to include in the results. In the 1981 Census, non-response amounted to less than 0.5 per cent.

Impact of Imputation

Where follow-up contacts are unsuccessful in obtaining missing information and systematic checking fails to resolve problems of inconsistent data, an imputation procedure is used to calculate likely approximations of the actual values. In general, imputed values make up a small proportion of the totals. For the 1981 census, less than 0.3 per cent of the totals for the question on farm area was imputed, and about 1.0 per cent of the total for cattle and pigs was imputed.

Special Notes

On page 17, the Land Use figures for improved and unimproved farmland do not total exactly. This was caused by the imputation program used by Statistics Canada. The difference is small and not of a substantive nature.

Also on page 17, it should be noted total unimproved farmland for 1981 is substantially below the 1971 figure. This is because land used for grazing on an animal unit or per head fee basis was completely excluded from the 1981 Census and is believed to be only partially excluded from the 1971 Census.

An appreciation of the extent of land administered under grazing fee, lease and permit can be gained from the following 1981 data:

Range District	Total Useable Crown Range	Total Crown Range Under Use Commitment
	-acres-	
Cariboo	11,787,658	10,608,892
